

## ADP issues:

- Life Cycle cost of software maintenance 90% of development cost.
- Software development costs vs hardware/firmware and off the shelf commercial capabilities
- Software (programmer productivity) how to measure, ~~and~~ how to evaluate and control programmer utilization.
  - instructions per hour/day
  - HOC use lots of finds
  - Structural design/prog (at)
  - Programmer teams
- ADP central service centers or small distributed systems what mix and why -
- ADP Charge back for services provided to consumers of ADP service.

- Intelligence Community Networks and ADP resource sharing - external networks and internal network policy and protocols
- Data base management policy - use general purpose commercial products or build and maintain special purpose - DBMS - cost/performance trades
- How is ADP contributing to Intel Analysts productivity - How is this being evaluated and monitored - What decisions are being made as a result of these evaluations on analysts productivity. What are the specific measures which can be applied across the community to evaluate ADP contribution to productivity.
  - maintain data base, office & computerically; beyond & manipulate data base
  - scenario analysis
  - threshold "
